

Shingle Installation

Description: *This process involves laying down individual shingles, typically made of asphalt, wood, or metal, in overlapping rows to create a waterproof barrier on sloped roofs. Proper installation is crucial*

for durability and protection against leaks.

Process: *The old shingles are removed (if applicable), the roof deck is inspected, underlayment is laid down for added protection, and then shingles are installed starting from the bottom edge to the peak.*

Cost: *Ranges from \$3,000 to \$5,000 per 1,000 square feet for asphalt shingles.*
