

# *Drip Edge Installation*

- **Description:** A drip edge is a metal flashing installed at the roof's edge to guide water away from the fascia and prevent moisture damage. It is critical for protecting the roof's edges.
- **Process:** The drip edge is placed along the eaves and rakes of the roof before shingles are installed. It should extend beyond the roof edge to effectively channel water.
- **Cost:** Ranges from \$1,000 to \$3,000 per 1,000 linear feet.
